

Make a little change

A small change in your lighting can make a big change in your electric bill. Replace older incandescent bulbs with modern compact fluorescent lamps (CFLs). You'll conserve energy, reduce greenhouse gases and save money too!

Energy Conservation Tips

- Turn off lights and other appliances when you aren't using them.
- Locate desks and work areas near windows so you can utilize natural light when possible.
- Install motion detectors on outside lights or put outside lights on switches to control their use.
- Reduce phantom loads from "instant-on" appliances like TVs and stereos by placing these appliances on surge strips and turning off the strips when not in use.
- Replace incandescent bulbs in five high-use fixtures in your home. In the U.S., this simple step would keep more than one trillion pounds of greenhouse gases out of the air, a reduction equal to the emissions of 8 million cars.
